Cox Communications

Capgemini · Telecom · 2018 — Present

- **Architecture & design authority.** Owns solution architecture and technical delivery for an enterprise telecommunications application used by 3,000 users, providing design authority and technical direction to a team of five developers based offshore.
- **Business analysis.** Works with business stakeholders on requirement gathering and feasibility checks, and turns approved requirements into design documents covering case lifecycles, data models, integrations and security.
- **Enterprise class structure.** Designs applications on the Enterprise Class Structure and Situational Layer Cake, using data pages, reusable components and reusable case and flow design patterns aligned with application architecture.
- **Integrations.** Designs and builds integrations with other systems, including a REST integration with a sales system and an S3 integration for document storage, covering connectors, authentication and error handling, and coordinates with other teams for the integration work.
- **Background processing.** Designs asynchronous processing with queue processors and job schedulers for background jobs, notifications and retries.
- **Security.** Owns application security for the team, covering access control design with roles and privileges, single sign on and authentication services, security reviews and security checks on the code delivered.
- **Development & code reviews.** Remains hands on with development alongside design work, and leads code reviews, guardrail compliance and mentoring of team members towards their Pega certifications.
- **Upgrades.** Led Pega Platform in-place upgrades through v24, supporting upgrade implementation, validation, and issue resolution with Pega SRs.
- **UI migration.** Led the migration from UI Kit to Theme Cosmos across the entire application, covering 20 workflows and 10 portals and bringing screen rendering time down from 5 seconds to 2 seconds.
- **Deployments.** Handles deployments using Deployment Manager.
- **Production support.** Leads the production support function, designing solutions for production tickets, including a solution design that brought recurring scenario tickets down to zero, with performance analysis on Pega Diagnostic Center, Splunk, New Relic and application logs.

AIG

TCS · Insurance · Oct 2015 — Dec 2017

- Built flows, user interfaces, activities and data transforms on an insurance application; developed validation rules and supported basic integrations.
- Carried out unit testing and defect fixing, debugging with Tracer and Clipboard; supported enhancements and issue fixes.
